DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-35 and 67-101, drawn to an apparatus for receiving an audio signal via a network, classified in class 455, subclass 130.
 - II. Claims 36-66 and 102-132, drawn to an apparatus for transmitting an audio signal via a network, classified in class 455, subclass 91.
1. Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they do not overlap in scope and are not obvious variants, and if it is shown that at least one subcombination is separately usable. In the instant case, subcombination I has separate utility such as an apparatus which has a receiving device for receiving an audio signal via network and an apparatus which has a transmitting device for transmitting an audio signal via a network. See MPEP § 806.05(d).
 2. Because these inventions are independent or distinct for the reasons given above and have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.
 3. Because these inventions are independent or distinct for the reasons given above and the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.

4. Because these inventions are independent or distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
